

The E-bike solves Uganda's Vulnerable communities' challenges of Unemployment, Sustainability and Accessibility.

On FABIO's encounter with the E-bike beneficiaries to ascertain the extent of their livelihood improvement, many confessed that indeed the E-Bike is a solution to their Socio-economic challenges

### **Mr Kalange Sulaiman Narrates his journey and experience with the E-Bike.**

"Am a resident of Bukaya village, Njeru municipal council, 56 years, a father of 6 children and bicycle cyclist/driver.

Life was so miserable before I got the FABIO E-Bike. I was using a manual bike locally known as *manigakifuba* implying that to ride that bike one has to derive a lot of energy from the chest. Because of that I had developed chest pain and my health had started deteriorating. I can never forget the days when I left home in the morning to go for work and came back with only 1000/= moreover with a big family to take care of.

Life had pushed me to the extreme and often felt like a useless father to my children who could not even support them.

The day I got the E-Bike became the most memorable and a turning point in my life and family. I now have a contract of delivering food on a daily basis to Bukaya Primary School and 6 pupils whom I transport to school everyday. My daily income has grown from 50000/= to 130,000/= a months. My health has stabilized and now am also able to pay school fees for my children.

**I want to convey my sincere appreciation to FABIO/EURIST for thinking about such programmes that support the vulnerable people. You created hope at time I had lost it all**
